

Hope Is Beautiful

On average, every two minutes a woman is diagnosed with breast cancer and one woman will die of breast cancer every 13 minutes. Breast cancer is the second leading cause of cancer death among women. This is why awareness, education, and breast health is so important at the Sood Center for Aesthetic and Plastic Surgery.

Treating women with breast cancer and helping them restore how they feel and look is one of the reasons Dr. Mohit Sood is so passionate about breast reconstructive plastic surgery. This movement has changed his life forever. At Sood Center, we appreciate that breast cancer can be a very terrifying diagnosis. Through experience, we acknowledge the tremendous personal, professional, and health-related burdens our patients are facing. The obligation of physician visits, imaging, and possibly even surgical planning is life-altering and can be overwhelming. It is our goal to empower breast cancer patients to achieve their overall reconstructive goals. We strive to provide a comfortable office environment where patients can freely express their concerns and goals.

So what exactly is breast reconstructive surgery? Breast reconstruction is a type of surgery for women who have had all or part of a breast removed due to cancer or trauma. Dr. Sood then rebuilds the breast mound to match the size and shape of the other breast. The goal is to restore confidence and comfort by creating both breasts

to be near normal shape, appearance, symmetry, and size. If only one breast is affected, it may be reconstructed alone. In addition, a breast lift, breast reduction, or breast augmentation may be recommended for the opposite breast to improve symmetry and aesthetic appearance.

Breast reconstruction generally falls into two categories: implant-based reconstruction or flap reconstruction. Implant reconstruction relies on breast implants to help form a new breast mound. Flap reconstruction uses the patient's own tissue from another part of the body to form a new breast. When choosing which option is best, relying on Dr. Sood's expertise, experience, and superior technical skills will provide confidence and comfort in developing the right plan to achieve your goals.

Dr. Sood is highly trained in cosmetic and reconstructive plastic surgery and can offer a wide range of options for women having breast surgery. He is knowledgeable, compassionate, and understands that breast disease is a major change in your body. Dr. Sood works with his patients to help them achieve their goals and address cosmetic concerns.

At Sood Center for Plastic Surgery, our mission is to provide you with safe and comprehensive care from a double board-certified, fellowship-trained plastic surgeon in the most comfortable environment possible. We treat every patient like a member of our family. Our commitment to our patients is to always be honest, and utilize all of our considerable expertise and resources to ensure that you attain your goals with exceptional results that look natural and beautiful. Our goal is to lead our patients down the path to healthier living, an uplifted self-image, greater personal freedom, and improved quality of life by utilizing a comprehensive range of services.
